Okpalaugo Kosisochukwu

Software Engineer C# || .NET Core || Sql Server
Lagos, Nigeria

Highly skilled, motivated, and result-driven Senior .NET Developer with comprehensive experience in system analysis, design, development, and integration of APIs and MVC applications. Adept at leading development teams, driving project success, and delivering high-quality software solutions. Proven expertise in enhancing system functionalities, managing data migrations, and optimizing performance. A collaborative leader with a passion for continuous learning and a commitment to excellence and active participation in the National Youth Service Corps (NYSC).

Experience

- Conclase(stackstart) Academy Backend Developer / Intern 2026-01-01 - Present.
- Developed functional backend applications including an ATM Simulator and a Library Management System.
- Designed and optimized database schemas using SQL Server and integrated them seamlessly using Entity Framework.
- Built scalable and secure RESTful routing systems using ASP.NET Core Web API. Collaborated effectively with team members on backend programming tasks and version control workflows.

Key Projects

- Gatherly (Event Management System) : A robust event management platform built to streamline event scheduling, registration, and attendee tracking. Tech Stack: C#, ASP.NET Core Web API, Entity Framework, SQL Server Key Features: Implemented relational database architectures to efficiently manage events, organizers, and attendees. Built clean API endpoints to support secure registrations and real-time event updates.
- Library Management System : A functional simulator for managing library inventories, tracking book availability, and handling user borrowing records. Tech Stack: C#, .NET, Object-Oriented Programming principles Key Features: Utilized advanced collections, structural class hierarchies, and core OOP principles to build a maintainable console-based architecture.

Gatherly (Event Management System)

- Description: A robust event management platform built to streamline event scheduling, registration, and attendee tracking. Tech Stack: C#, ASP.NET Core Web API, Entity Framework, SQL Server Key Features: Implemented relational database architectures to efficiently manage events, organizers, and attendees. Built clean API endpoints to support secure registrations and real-time event updates.

Education

University of Calabar, Crossriver – bachelor's degree· (2019 – 2024)
